New Disposal Rule of Plastic Bottles Starts

Put plastic bottles directly in the net bag installed at the collection site.

Three main purposes of new rule

The content in the net bag is visible so that it can be checked that bottles are disposed of correctly. By following the rule, you can help increasing the amount of recyclable plastic bottles.

Dirty bottles are not recyclable (leftovers, cigarette butts, etc.).

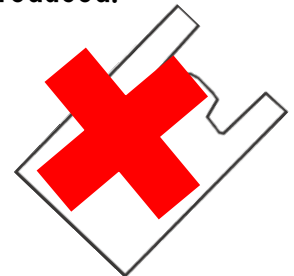

To increase the amount of recyclable plastic bottles

It is easier to see the separated garbages at the collection site and shortens the collection time. Missed collection and delay will be avoided.

To improve the collection site management

As the result of using the net bag instead of plastic bags, huge amount of plastic bag garbage will be reduced.

To reduce the amount of garbage

New disposal rule of plastic bottles starts!

At home

Remove

Rinse

Crush

Take

Nearby collection site

○Put **plastic bottles** and **removed caps** in the net bag at the collection site.

*Take home **the bag** used for carrying the bottles.

○The net bag can hold about 140 of crushed 2-liter plastic bottles. But only about 50 if not crushed. Make sure you **crush** the bottles when disposing of them.

Request to the garbage collection site managers

We thank you for keeping the garbage collection site clean. Though this change of collection rule might cause you some trouble, we sincerely appreciate your further understanding and cooperation on the garbage collection.

○ One net bag will be distributed to each collection site **from Monday, September 5.**

(Examples of installing the net bag)
• Using laundry pinches
• Using S-shaped hooks, etc.

- Install the net bag so that it can be attached and detached repeatedly. Only plastic bottles are collected, not the net bag. Never fix the net bag to something.
- * The same net bag is used until it is too damaged to use.

○ **Users of each collection site must maintain** the net bag properly to prevent the net bag from being carried away by wind or so. If plastic bottles overflowed the net bag, put them in transparent or semi-transparent bags and place them by the net bag.

※We set the get-acquainted period until December 29, 2022 and collect plastic bottles until then even if the net bag is not installed. From January 4, 2023, we start the net bag collection system in entire Narashino city.
